## Profile

Industrial engineer and applied AI engineer building reliable systems where models meet real operational constraints. At Foundation29 I moved from R&D into production ownership: built the organization's first GenAI evaluation capability (ship/no-ship gates), shipped TrialGPT end to end, and helped raise DxGPT's evaluated diagnostic accuracy from ~70% to 93% at ~700K queries/year. Previously LLM-based program synthesis and agent evaluation at Sony Europe's ML R&D lab; contributor to EU AI Act technical standards at UNE. My edge: industrial systems thinking + AI evaluation + end-to-end product engineering — I structure ambiguous domain problems, build the system, and produce evidence for operational decisions. Now focused on deployment and systems-integration work where AI must survive contact with customers, infrastructure, regulated workflows or physical operations. Projects at [infraphysics.net](#).

## Professional Experience

### Applied AI Engineer — Clinical AI

([Foundation29](#))

Madrid, Spain

01/2025 – Present

Built the organization's first GenAI evaluation capability, turning clinical cases and normalized diagnostic ground truth into benchmarks for model selection and ship/no-ship decisions. Helped raise DxGPT's evaluated diagnostic accuracy from ~70% to 93% (~700K queries/year) through model selection, inference-pipeline optimization, prompting and safety guardrails. Shipped TrialGPT end to end — document parsing, clinical concept extraction, trial matching, human review, UX, backend, Azure deployment. Provider-agnostic infrastructure (OpenAI, Azure OpenAI, Claude, Gemini) with multi-region failover and latency/cost optimization.

### Product Engineer (freelance)

([Leadrank](#))

Barcelona, Spain

02/2026 – Present

AI system converting unstructured email history into structured contacts, deals, buyer intent and property matches. Designed the ingestion and extraction pipeline (historical + real-time) with entity resolution and match generation. Validating workflows and demand with real-estate agents in Barcelona and Madrid.

### Committee Participant, AI Standards — EU AI Act

([UNE](#))

Madrid, Spain

02/2026 – 05/2026

Independent participant in CTN 71/SC 42, Spain's mirror committee of CEN/CLC/JTC 21. Studied prEN drafts and standardization workflows on AI system evaluation, bias management, dataset quality, risk management and conformity assessment.

### ML & Distributed Systems Engineer

([Sony Europe](#))

Brussels, Belgium

02/2024 – 10/2024

Blockchain network analysis and optimization at Sony's Brussels ML R&D lab, expanded into LLM-based program synthesis and agent evaluation. Designed an execution-based evaluation loop measuring agent reliability through compilation, automated tests and network deployment. Operated the Hyperledger Besu network, SDK and monitoring (DSPy, LangChain, TypeScript); selected optimizations adopted into Sony's work.

### Supply Chain Data & Automation Intern

([TE Connectivity](#))

Barcelona, Spain

05/2023 – 10/2023

Automated inventory, CRM and bill-of-materials reporting with Python and SQL; built pipelines improving data quality and operational visibility across supply-chain planning.

### Research Engineer, Safety-Critical Systems

([CIMNE](#))

Barcelona, Spain

09/2021 – 07/2022

Co-designed the software architecture for LASH FIRE (EU Horizon 2020, ro-ro vessel fire safety); vehicle-sorting algorithm improved simulated fire-safety outcomes by 7%. Evaluated early GPT-3 models for technical work before LLMs became mainstream.

## Technical Skills

**Languages:** Python – TypeScript – C++ – Solidity

**LLM & evals:** OpenAI / Azure OpenAI / Claude / Gemini – LangChain – LangGraph – DSPy – Pydantic AI – MCP – RAG – evaluation frameworks – prompt & context engineering

**ML & data:** PyTorch – HuggingFace – Pandas – Scikit-learn – OpenCV

**Infra & systems:** Azure (multi-region) – AWS – Docker – Kubernetes – GitHub Actions – Azure DevOps – Supabase – Vercel – Hyperledger Besu – SAP – simulation & optimization

## Education

**IIA**, Executive Master in Artificial Intelligence

2024 – 2025, Madrid

**CodeCrypto**, Master of Blockchain Engineering

2025, Madrid

**UPC-ETSEIB**, MSc in Industrial Technologies Engineering (IT focus) — thesis with Sony

2022 – 2024, Barcelona

**UPC-ETSEIB**, BSc in Industrial Technologies Engineering

2017 – 2022, Barcelona

## Certifications & Languages

**Advanced Model Context Protocol** — Anthropic (08/2025) · **Agile PM Practitioner** — Schneider Electric (12/2024)

English C2 · French C1 · Spanish native · Catalan native
